## **The Surprising Connection Between Language & Kids Puzzles**

**By Chris Peace**

One of the most important skills children need to success is language. Research has shown that if children are having problems with language development by the age of five, they are more than likely going to have a long-term struggle with reading and other parts of education. That's not good news for parents. What is good news is that there are kids puzzles that can be effective in helping children effectively develop their language abilities.

### Language Development Facts

If you're interested in shocking facts, one of the most shocking involves the speed of a child's language development. Babies, as you know, have no language ability when they are born. They only cry and make small noises until they are many months old. After they pass the point of acquiring language, however, they do so at a remarkable rate. By the age of 5 years old, the average child understands thousands of words and has technically mastered the grammar rules of his or her language.

Plus, most children accomplish all of this without any formal education. Instead, they learn everything from interacting with their parents and other people around them.

### Kids Puzzles & Language Development

As a parent, you're going to want to encourage early language development in your child because this is going to give him or her the greatest chance for future success in school and in life. Communicating with your child is one of the most important steps but you can also help by providing him or her with certain types of kids puzzles.

One of these types is known as pair puzzles. Although they do come in a wide assortment of topics, many are based on educational and language-related themes. For example, children can use them to learn the alphabet, match rhyming words, learn basic vocabulary, and identify opposites.

With these types of puzzles, children are asked to match appropriate pieces together. For example, if the child was working on the opposites kids puzzles, he or she may have to connect a piece labeled

“hot” with a piece labeled “cold.”

#### Other Improved Skills

Besides improved language development, kids puzzles can also provide an important boost in cognitive abilities, such as problem solving and reasoning. These skills will also play a further role in language development, as well as in reading comprehensive and literature analysis.

Plus, stronger language skills gives kids the advantage when asking for assistance from teachers, when communicating and making friends with other students, and when learning other subjects in school, including social studies, science, and even math. Those story problems are never as challenging for a student who has good language development thanks to kids puzzles.

#### Fun & Educational

While reading and communicating to your child starting from the earliest point possible are critical parts of language development, providing children with these kids puzzles that can provide an additional incentive for practicing these skills is always a good idea. Plus, you child will have so much fun with the kids puzzles, he or she won't know they are learning.

Smalltime Child offers a great selection of Kids Puzzles, Children's Puzzles, & Puzzles for Kids.&nbsp; Check us out on the web at <http://www.smalltimechild.com>

## Good Reasons To Use Kids Puzzles To Help Kids Learn Language

By Chris Peace

When it comes to learning and preparing for the future, children's minds don't start the moment they enter school. Instead, their minds are working on acquiring these important abilities from day one and parents have a responsibility for doing everything possible to help children develop these skills and abilities successfully. Language development is a good example and one that can be easily helped along by the use of some fun, educational kids puzzles. Below are a few good reasons why you should consider using these kids puzzles for your children.

### Language is the Most Important Skill

If you think about the skills your child needs in life, the most important one is always going to be language. Without language, your child won't be able to communicate effectively and will be frustrated in his or her efforts to obtain desired things. Children need to have excellent language development before they ever enter school or they will face an uphill battle which they are unlikely to ever win.

### Other Reasons Language is Important

Not only will language help your child scholastically, but language is also vital to social relationships. We talk to people in order to make friends. If your child has trouble doing this then forging bonds with others will always be a challenge.

Furthermore, language allows us to have thoughts. You could not have whatever thought is in your mind right now if you didn't have the language skills to express it verbally or in writing or in some other form. You simply can't think words you don't know.

For these reasons alone, using kids puzzles that are design to assist in language development at an early age should be considered a good idea. However, there are other reasons to recommend the use of kids puzzles.

### Consequences of Language Problems

Although kids puzzles won't prevent all language development problems, they may be able to help improve your child's skills, especially when utilized at a young age. Even some improvement could help prevent the types of problems researchers have found in children with poor language skills. More than 40% of children with poor language skills also have behavior problems. Nearly three-fourths have serious reading problems before leaving elementary school. About 20% of juvenile offenders (maybe even more by some research standards) have language development problems.

Although giving your child kids puzzles won't guarantee that he or she never has any of these problems, it can also assist you in recognizing that a problem does exist and that can give you a huge advantage in dealing with the problem.

### Early Detection of Language Problems

Nearly one-fifth of all children who are in preschool right now have some type of language

development problem. Unfortunately, about half of them will not have their problem discovered before they start school. If you are using kids puzzles, however, you are going to spot a problem early and will be able to get help from trained professionals.
